

Disoder of cognition/DSM Shigeru Nakamaru IOND UNIVERSITY JAPAN, USA

ABSTRACT Diagnostic and statistical manual of mental disorders on disorder of cognition (DC/DSM) described disorders of human as computer program in DSM.

Artificial cognition and disorder of cognition (AC/DC) are computer programs as laws(Nakamaru 2005a). DSM(Diagnostic and statistical manual of mental disorders) is check list for measure or estimation of psyciotorical problem. In this study, there dealt with each behaviors or reactions by DSM on DC(DC/DSM). DC/DSM is consisted by memory system as human cognition. Kinds of memory are sensory memory(SM), short term memory(STM), long term momory(LTM), working memory(WM). There is disorder in memories on DC belong DSM, for example, small STM, only WM without STM and so on. Memories in LTM are meaning part, procedure part, episode part, and self-concept part.

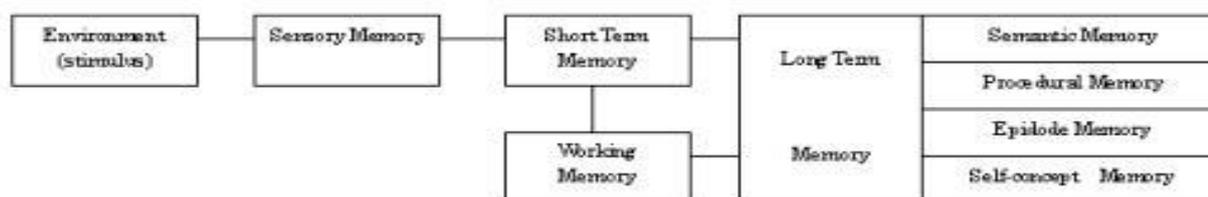

Figure 1 Memory system for artificial cognition and disorder of cognition

DC/DSM described disorders of human as computer program. For examples, there are DC/DSM for reading disorder, mathematic disorder, conduct disorder, and schizotypal personality disorder. Learning disorder is difficulty to learn or aquirement of knowledges. Reading disorder (DSM/ 315.00) is hardly to understand word or sentence. Mathematics disorder(DSM/315.1) is hardly to operate numbers(arithmetic operation). Conduct disorder(DSM) is rough, violence, evil, or crime. Schizotypal personality disorder(DSM/301.22) is soft schizophrenia(believed ESP, ghost, telepathy, superstition, soft delusion of reference, and so on). There is behavioral traits on artificial cognition for self concept, for example, like a PAP or POPs(Nakamaru 2003,2004,2005b). Creation of DC/DSM is necessary to analyze of behavioral script belong DSM or ICD(international classification of disease). There is resolution of cognitive parts in psychiatric problems by DC/DSM analysis. By study of DC/DSM, there are progress to knowledges and of analysis in psychiatry and artificial personality study.
