FAST ACCOUNTING

FAST ACCOUNTING

FAST ACCOUNTING

Trade name Fast Accounting Co., Ltd.

Established June 2016

Address Shiba Park Building A 3F, 2-4-1 Shibakoen, Minato-ku, Tokyo, 105-0011

Representative Keitaro Mori, Director and CEO

Main lines of business AI solution business specialized in the field of accounting
(Accounting AI Business)

Corporare number 7010401125256

Invoice registration number T7010401125256

Automation and Efficiency in accounting operations with AI.

The AI era in accounting has arrived—performing

tasks with accuracy exceeding human capability

AI Accounting Agent Achieves FASS Exam Level A—Making Accounting Singularity a Reality

Our company's accounting AI agent has achieved the highest rank, Level A, in the FASS examination conducted by the CFO Association, correctly answering nearly all questions across four domains: assets, taxation, fund management, and financial closing. This demonstrates that many of the core judgment tasks in ERP-related accounting work can now be performed by AI.

Impact on Corporate Management and Society

The evolution of accounting AI agents extends beyond internal operational efficiency, significantly affecting overall management:

Accelerated decision-making: Real-time financial data analysis enables rapid management decisions

Advanced accounting talent: Automation of routine tasks allows accounting staff to deeply engage in ROIC management and financial analysis

Enhanced global competitiveness: Productivity and ROE gaps widen between companies utilizing AI and those that don't

Fundamentally Changing the Role of Accounting—Enabling Management and Strategic Accounting with AI Agents

Traditionally, accounting departments have spent significant time on journal entries, closing procedures, tax compliance, and audit responses. With a severe market shortage of accounting talent, companies have been forced to rely on BPO services and temporary staffing agencies. However, with the accounting AI agent achieving the highest FASS exam rank, we've entered an era where AI can handle accounting judgment tasks.

"When will AI surpass humans?"

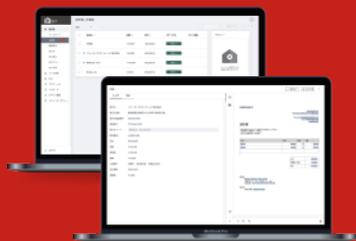

The answer to this question has already emerged.

The accounting AI agent's achievement of Level A in the FASS exam, with nearly perfect scores across asset, tax, fund, and closing procedures, demonstrates that the singularity in accounting is not a future concept but a current reality.

Invoice Processing Platform

Remota GUI

Remota is a cloud service for invoice processing. It uses OCR to extract dates, amounts, and suppliers, with AI for verification and account classification, and integrates with ERP and workflow systems.

Accounting AI Modules

Robota Series API

Robota is an AI engine designed for efficient accounting operations. It offers various AI engines via API for tasks such as AI-OCR reading of invoices and receipts, pre-processing (including sorting and trimming), and journalizing and verification.

Digital Invoice Sending and Receiving Service

Peppol Access Point API

Peppol is an international standard for digital invoicing. Fast Accounting has been certified by the Digital Agency as a Peppol service provider and is advancing service development to enable digital invoice transmission and reception.
